CERN highlights 2021

UCI FASER particle detector made it into CERN's 2021 news highlight reel.

Physicists in the UCI Department of Physics & Astronomy designed and built a particle detector called FASER that could help scientists find evidence for the existence of the biggest thing in the Universe. The place FASER lives — the European Organization for Nuclear Research (CERN) in Europe — just featured FASER in a news roundup video for 2021.
